Evaluate site-specific field conditions, including chemical, biological and physical

Learn how to build soil quality and improve overall farming system

Promote integrated cropland management and Technology exchange

Develop sustainable communities
Why Integrated Cropland Management and Sustainable Communities?

- Evaluate and implement best management Practices/approaches for cropland Management within an integrated system

- Improve soil quality, water quantity/quality, air quality, nutrient and salinity management, crop yield/quality, animal production/quality, irrigation water management, integrated pest management, wildlife habitat.

- Reduce overall on-farm energy use, inputs, production costs, pest incidences, pumping costs, water loss, soil loss.

- More economical, sustainable farming enterprise

- Healthier watershed and community
