

**Routine Grazing
Conservation Reserve Program (CRP)**

CRP Participant _____ CRP-1 Contract No. _____

Tract No: _____ Field No (s): _____

Definition

The primary purpose of this plan **must** be to maintain vegetative cover, minimize soil erosion, protect water quality, and protect wildlife habitat quality.

General Provisions for Managed Grazing

- CRP routine grazing activities apply to practices CP1, CP2, CP4B, CP4D, CP10, CP18B, CP18C, CP38E-CP1 Introduced Grass/Legume and CP38E-CP4D Permanent Wildlife Habitat. Acreage ineligible for managed grazing includes acreage devoted to:
 - any practice not listed above.
 - acres planted to trees in CP4B, CP4D and CP38E.
 - useful life easements
 - land within 120 feet of a stream or other permanent water body
 - Acreage shall become eligible 12 months after the cover is fully established.
 - Routine grazing is not authorized during the primary nesting and brood rearing season. In Minnesota, the primary nesting season ends August 1st.
 - Routine grazing is authorized for a single period starting on August 2nd and ending September 30th.
 - Routine grazing is authorized no more frequently than 1 out of every 3 years after the cover is fully established.
- NOTE:** Emergency haying or grazing restarts the clock.
- Either haying or grazing, NOT BOTH, will be permitted on the same acreage once in the same three year period.

- CRP participants who do not own or lease livestock, may rent or lease the grazing privilege to an eligible livestock producer. The eligible livestock producer may not sublease the grazing privilege to another livestock producer.
- CRP participants shall be assessed a payment reduction based on the number of acres actually grazed times the CRP annual rental payment times 25 percent.
- Before doing any grazing, CRP participants shall:
 - Request approval from FSA before grazing eligible acreage.
 - Specify acreage to be grazed.

Requirements for Managed Grazing

- The minimum vegetation height to begin grazing shall be 8 to 10 inches for cool season grasses. For tall warm season species (such as switchgrass, big bluestem and indiangrass) the minimum vegetation height to begin grazing is 10 – 14 inches, and for short to medium height species (sideoats grama, little bluestem) the minimum height shall be 5-7 inches.
- End grazing when the stubble height reaches 3 to 4 inches for cool season species and medium height warm season species, and 6 to 8 inches for tall warm season species. The stocking rate will be determined using NRCS standards.

The United States Department of Agriculture (USDA) prohibits discrimination in its programs on the basis of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation and marital or familial status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication program information (Braille, large Print, audiotape, etc.) should contact USDA's Target Center at (202)-720-2600 (voice and TDD).

To file a complaint of discrimination, write the USDA, Director, Office of Civil Rights, Room 326W, Whitten Building, 14th and Independence Ave. SW. Washington D.C., 20250-9410, or call (202) 720-5964 (voice or TDD). USDA is an equal opportunity provider and employer.

Managed Grazing, (continued)

- Livestock will be removed from fields when the minimum stubble height is reached or by September 30th, whichever comes first.
- Any cover destroyed or damaged as a result of participating under this authority, will be re-established at the CRP participants own expense, regardless of recommendations or determinations made by NRCS or the TSP
- A GIS generated aerial photo of the area to be grazed will be attached to this grazing plan with the area to be grazed identified.
